DT12 Rec'd PCT/PTO 1 0 JAN 2005

We claim:

ART 34 AMOT A process for selectively hydrogenating citronellal to 5 citronellol in which a liquid phase, in which the citronellal is dissolved and particles of a catalyst are suspended which is capable of preferentially hydrogenating carbon-oxygen double bonds over carbon-carbon double bonds, is conducted through a device which inhibits the transport of the catalyst 10 particles in the presence of a hydrogen-containing gas, the liquid phase further comprises ammonia, a primary, secondary and/or tertiary amine as well as an inert diluent, and wherein the concentration of citronellal in the liquid phase is from 50 to 90% by weight.

15

- 2. A process as claimed in claim 1, wherein the active component of the catalyst comprises ruthenium.
- 3. A process as claimed in claim 1 or 2, wherein the device 20 inhibiting the transport of the catalyst particles has orifices or channels whose hydraulic diameter is from 2 to 2000 times the average diameter of the catalyst particles.
- A process as claimed in any of the preceding claims, wherein 25 catalyst particles having an average diameter of from 0.0001 to 2 mm are used.
- A process as claimed in any of the preceding claims, wherein the device inhibiting the transport of the catalyst particles 30 is a dumped packing, a knit, an open-celled foam structure or a structured packing element.
- A process as claimed in any of the preceding claims, wherein 6. the liquid phase and the hydrogen-containing gas are 35 conducted through the device inhibiting the transport of the catalyst particles at a superficial velocity of more than 100 m^3/m^2h .
- A process as claimed in any of the preceding claims, wherein 40 the surfaces of the device facing toward the liquid phase have a roughness in the region of from 0.1 to 10 times the average diameter of the catalyst particles.
- A process as claimed in any of the preceding claims, wherein 45 the diluent is a C_1-C_6 -alkanol.

- 9. A process as claimed in claim 8, wherein the diluent is a $C_1\text{--}C_6\text{--alkanol}$.
- 10. A process as claimed in any of the preceding claims, wherein the liquid phase further comprises ammonia, a primary, secondary and/or tertiary amine.
- 11. A process as claimed in any of claims 8 to 10, wherein the concentration of citronellal in the liquid phase is from 50 to 90% by weight.
